

Arke specialises in Decision Support processes, particularly within Defence Research and Development. We design frameworks that enable the capture and exploration of qualitative and quantitative data to derive valuable and actionable insight.

Adaptability Assessment Framework (AAF)

Arke has developed a framework to help project teams and stakeholders better understand the future change landscape. This can inform flexibility needs for systems delivered into service, ensuring the desired capability effect, through life.

The AAF is a collection of tools and techniques that provide a systematic approach to describing adaptability in systems. This enables programme teams to make considered, evidence based decisions about what level of adaptability the systems need and what gives best value for money.

Benefits of using the AAF include:

- Improved understanding of system or 'system of systems'.
- Increased awareness of breadth of change landscape.
 - Improved capture of diverse perspectives.
 - Reduced reliance on siloed specialists.
 - Reduced risk of commercial tie-in.
- Increased awareness of adaptability mitigations.

The AAF helps cut through complexity to arm you with the evidence and advice you need to make good decisions in an increasingly uncertain operating environment.
