

The SCUBA team is formed of collaborative best-in-class SMEs that cover a broad range of support to the Underwater Enterprise.

We cover a combination of independent and impartial development analysis, provided by companies with no design or manufacturing interest through to companies with real-world experience of designing, trialling and exploiting products.

Provides cost estimating, evidence-based decision making, project and programme management.

Enables the development of robust, optimal support systems ensuring that assets continue to deliver, at the right cost, for life.

Helps clients understand their cyber security risks and improve their security posture.

A software development team that specialises in artificial intelligence in manned and unmanned marine vehicles.

Specialises in the design, manufacture and operation of crewed and uncrewed submersibles.

Combines in-depth technical expertise with broader systems thinking to scope and solve complex problems.

Specialises in providing safety, environmental and marine engineering support.

Specialises in naval architecture and marine engineering.

Ensures that systems and products are designed with users in mind across a wide range of sectors.

We cut through complexity to arm you with the evidence and advice you need to make good decisions.
